

Thursday Night Lectures

Hans Mönninghoff

Moving Cities to Low Carbon - Lessons from Hannover

Hannover has over twenty years of experience in planning to meet Climate Change, and a Low Carbon Future. Hannover has committed itself to a wholistic sustainable urban strategy, whose aims are derived from a vision of sustainable development

and comprise protection of natural common goods, social justice, responsible lifestyles, urban planning and development, mobility, business development, sustainable local economy and global responsibility for local action.

Hans will outline the experiences of Hannover in Climate Protection, Planning for a Low Carbon Future, the Development of Model Urban Projects, Sustainable Resource Management, and Energy, amongst others. Given how long Hannover has been working in these fields, they have learnt many valuable lessons in what to do, and what not to do, as well as some of the barriers to implementation.

About the speaker:

Hans Mönninghoff has been dedicated to energy and climate protection politics for over 30 years. As Deputy Chief Executive for the City of Hannover Mönninghoff established and led Hannover's

Carbon Reduction Initiatives with a target of 40% below 1990 levels by 2020, on the back of existing successful initiatives to reduce carbon. Mönninghoff has played a key role in the development of Hannover as the greenest City in Germany with the most square meters of green space per capita.
