The Magenta Shores project is an integrated residential resort community on a spectacular site located near the North Entrance. The site is bordered by the Pacific Ocean on one side and the Wyrrabalong National Park on the other. The master plan includes a five-star resort facility, 362 houses and 120 holiday villas. Of these, we have currently constructed 52 houses, the resort facility and 80 villas.

This intensive 10-day workshop will address: The making of communities, environmental ESD issues and the creation of quality small lot medium density housing that must perform spatially as well as formally. It will also look at the macro level, incorporating master planning and streetscape composition. This is a very challenging project with a rich palette balanced by the rigors of a complex housing typology.

Only 4 students can be accepted into this workshop. They will work under the guidance and in the studio of the senior HPA design team, which have won numerous RAIA and international awards.
