

P.011 DAVID Tannatt William Edgeworth

Series 2 British Antarctic Expedition 1907-09 - miscellaneous scripts by D

Date Range: 1910? - 1910?

Accessions: 1/24, 1/69

Quantity: 0.07

Item List: no

Series Description:

Observations on geology - handwritten, mainly in ink, probably for joint papers with R E Priestly (quantity : 1 cm); also notes for addresses/lectures, a carbon copy of a handwritten list of photographs (28 pages), a four page handwritten script entitled "Retrospect" and other papers relating to this expedition.

It was impossible to differentiate script written for the Stockholm Conference* from script for other papers co-authored with R E Priestly. Hence, manuscript in David's hand has been arranged in this series; typescript which was probably used for the publication by W Heinemann, London 1914 entitled "British Antarctic Expedition 1907-09 - Reports on Scientific Investigations - Geology" is in series 3, and unidentified typescript in series 6.

*The Stockholm Conference refers to the International Geological Conference XIth Session held in Stockholm in 1910. David's paper, in collaboration with Priestly and Mawson, was read by Professor Sollas (refer to series 7: letter received by David dated 11 January 1911).

Regarding original order: it is assumed that David kept papers relating to Antarctica together. Some of the papers had been boxed by subject viz "Antarctica", "Funafuti", "Geology of Australia", "fossils", "War", "lecture notes", "maps and plans".
