Analysis on Nerve Biopsy

Histochemical & Immunocytochemical stains are performed on frozen, paraffin and plastic sections.

Standard Panel of stains: Performed on all biopsies.

- Haematoxylin and Eosin (H&E) on frozen and paraffin sections.
- Toluidine Blue stains on semithin plastic sections.
- Teased fibre preparation for axonal and demyelinating/dysmyelinating pathology.
- Congo Red for amyloid
- Immunofluorescence for Ig, complement and fibrinogen

Special stains: Performed if required.

- Light Chain Kappa & Lambda (IF)
- Verhoeff’s Elastic Fibre Stain
- Ziehl-Neelson Stain for Acid Fast Bacilli (Modified)
- IHC Panel (paraffin sections): CD3, CD4, CD8, CD20, CD68 and other cell markers.

Electron Microscopy: Performed at Concord Hospital if required.
