Speech pathologists at The University of Sydney need children who have difficulty pronouncing speech sounds to participate in a research project.

- Is your child's speech difficult to understand?
- Does your child pronounce different words the same way (e.g., 'show' and 'go' both sound like 'dough')?
- Does your child leave off some sounds at the beginnings of words (e.g., says “poon” for “spoon”)?
- Does your child has difficulty with one specific speech sound (e.g., lisping ‘S’ or unclear ‘R’ or difficulty pronouncing ‘L’)?

If you have answered yes to one or more of the above questions and your child is between 4 and 10 years, your child may be eligible to participate in a study about how we listen to and produce speech.

**WHAT IS INVOLVED?**

- Attend the Communication Disorders Treatment and Research Clinic at The University of Sydney, Cumberland Campus, in Lidcombe for ONE 60-minute appointment.
- During the appointment, your child will receive a free speech and hearing screening assessment.
- Your child’s speech will be recorded, and then with your permission, used in research to find out how adults and other children listen to and understand speech from a variety of people.
