The Bosch Institute’s recent acquisition of the Shimadzu UHPLC-Triple quad mass spectrometer system has expanded the capabilities of the Institute to perform new and more sensitive analyses. The Bosch Institute, in conjunction with Shimadzu Scientific, is presenting a series of seminars and workshops to ensure the new system is used to its full capability for all research projects.

The course utilizes a lecture and lab format at the Bosch Mass Spectrometry Facility (BMSF). Topics include general introduction to UHPLC and MS, applications on QQQ / Workflow, and biological sample preparations.
