SUPPORT FOR NHMRC PROJECT GRANT PREPARATION FOR EARLY CAREER RESEARCHERS - FACULTIES OF HEALTH 2016

In 2010, with the help of a number of experienced researchers, we devised a new program to help you to develop your NHMRC project grant proposal. This year we are offering a modified version of the program to assist with the grant application process.

How it will work
Please fill out the EOI at http://surveys.rws.medfac.usyd.edu.au/index.php/982276?lang=en. You will need to have prepared your list of publications, information on co-investigators, and be able to answer the following questions.

- What is the problem?
- Why is this important?
- How do you aim to address this problem?
- Outline of experimental design
- Why is this study feasible? Include any preliminary data
- Why are you the best person to address this problem?

We will send your EOI to various expert reviewers who will send you feedback on your proposal including feasibility, experimental design, significance, innovation and track record. They may ask you for further information. You may have opportunity to discuss further directly with reviewers.

Outcome
Your NHMRC project grant proposal will have been strategically and operationally reviewed by two separate panels of experts with feedback.

This is an opportunity for you to have the best possible proposal to submit to the NHMRC but you must commit to the timeline so that the experts can help you.

To apply, please follow the instruction on the following Information Cover Sheet.
