Revised Closing date: 31 March 2016

Postgraduate PhD scholarship: Agent-based modelling, simulation and forecasting of epidemics
This PhD study will aim at developing (i) novel modelling framework for forecasting of critical phenomena during epidemic crises; and (ii) novel computational methods for large-scale agent-based simulation of disease diffusion based on complex networks, information theory and percolation theory. Applicants must satisfy the eligibility criteria for PhD enrolment at The University of Sydney, and those with backgrounds in applied mathematics, physics, computer science, information theory, complex networks and computational epidemiology will be beneficial. Valued at the APA rate ($26,288pa in 2016) for up to 3 years. [Link](http://agile2.ucc.usyd.edu.au/ro/opportunities/scholarships/1708)
Closing date: 4 July 2016

John A Lamberton Research Scholarship
These scholarships provide financial support for postgraduate scholars of exceptional ability who are working toward higher degrees at the University of Sydney in areas emanating from and inspired by the work of Dr John A Lamberton or in the area of science aimed at chemical understanding of brain function and malfunction. Open to both domestic and international
students. Valued at the APA rate ($26,288pa for 2016) or at $7,000pa for supplementary scholarships, subject to availability of funding.
