# Project Title:
Post-operative pain management after caesarean section.

**Literature review and patient study**

**Code:** SAH1

## Host School/ Institute
Sydney Adventist Hospital Clinical School

## Address:
Sydney Adventist Hospital Clinical School
185 Fox Valley Rd, Wahroonga NSW 2076

## URL:

## Personal Supervisor:
Dr Paul Stewart

## Phone:
02 9487 4310

## Email:

## Co-supervisors:
**Associate Professor John Keogh**

## Project Type:
Literature Review, Data analysis, Survey

## Project Category:
Neuroscience, pain, anaesthesia, obstetrics

## Project Keywords:
1. Pain Management
2. Anaesthesia
3. Obstetrics
4. Caesarean section
5. Surgery

## Project Description:

Pain relief after caesarean section may be provided with combinations of patient controlled epidural analgesia, patient controlled intravenous infusions, intrathecal narcotic injections, paracetamol and non-steroidal anti-inflammatory agents. The successful student will perform a literature review and perform a survey of the different techniques of analgesia after caesarean section at the Sydney Adventist Hospital.

This will be submitted to a peer reviewed journal.

The analgesic techniques and total analgesic requirements during the first 72 hours after caesarean will be examined in the patients over the eight weeks of the study. The study will assess patient satisfaction and the effectiveness of the different techniques using the visual analogue scale. The side effects of the analgesia techniques will be documented.

Experience with statistical analysis and excellent communication skills are required to participate in this study.
