## RESEARCH SUMMARY

Since 2020, I have started up and led the Laboratory for Electrochemical Engineering (LEE) at the University of Sydney. Specialising in electrochemistry, catalysis, nanomaterials and chemical engineering, our mission is to create a carbon-net-zero future by advancing new chemistry and processes able to produce sustainable fuels and chemicals using only renewable resources (e.g., water, air, biomass) – powered by renewable electricity instead of fossil fuels. Over the past three years, LEE has secured over \$7.2 million in research income to support our research. We have produced significant outcomes, including publishing over 10 articles per year in top 10% journals such as *Science* and obtaining two patents. Since 2020, I have trained over 20 higher degree research students and postdoctoral researchers, given over 10 invited talks per year in conferences and research institutes, and reached out to more than 400 members from the general public through outreach events.
