

Roderick Distinguished Lecture

Friday 24 May 2019

Mark Elliott

CEO
Northwest Rapid Transit

Join us on Friday, 24 May for the first Roderick Distinguished Lecture for 2019, in which we will hear from **Mark Elliott**, CEO of **Northwest Rapid Transit**, who is leading the Operations Trains and Systems (OTS) contract as part of Sydney Metro Northwest, Australia's biggest public transport project, the first stage of which will open to customers on 26 May 2019.

Mark will present a pictorial journey through his career from site engineer to CEO with personal insights into engineering and construction.

He will explore the cycles and continuous evolution that affects the engineer in Australia and beyond

Speaker

Mark Elliott is a graduate of the School of Civil Engineering. His career has embraced construction, mining, and infrastructure engineering and contracting, with an emphasis on project delivery. He is currently CEO of Northwest Rapid Transit, delivering Australia's biggest public transport project

Mark is a member of the Infrastructure Partnerships Australia – Transport Taskforce. He was previously Chairman of the not-for-profit organisation Engineers Without Borders and President of the Civil Constructors Federation (Northern Territory). Mark has completed Stanford University's Executive Program in Leadership and MGSM's Strategic Management Program.

Mark is currently Chairman of St Pauls College within the University.

Date/Time

Friday 24 May 2019

1:00pm to 2:00pm

Location

PNR Lecture Theatre No 1, Faculty of Engineering & IT, University of Sydney.

The Roderick Distinguished Lecture Series

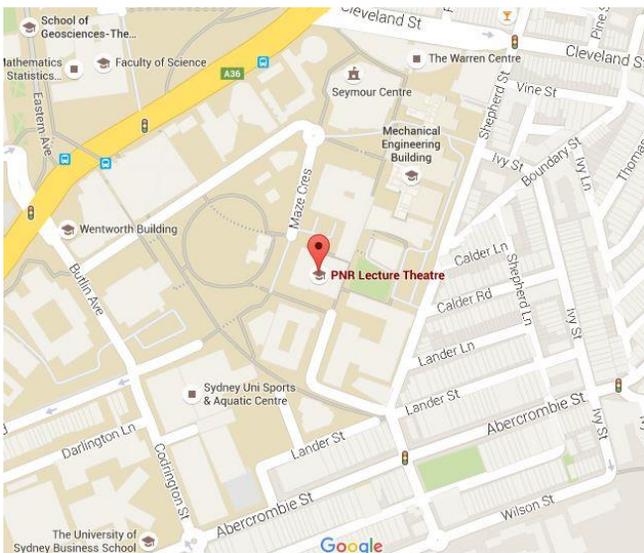

The Roderick Distinguished Lecture Series brings the leaders of industry and government to the University to present to the civil engineers of tomorrow the challenges and opportunities which they and their organisations face and the role that civil engineering plays in their work environment

The Roderick Lectures are an initiative of the Council for Civil Engineering Sydney, an industry advisory group formed to assist the School of Civil Engineering to deliver world-class education and research through an inclusive program of engagement between industry and academia at all levels.

The Roderick Lectures are promoted widely to the students as well as the industry network of the School of Civil Engineering

The Roderick Lecture series acknowledges Professor Jack William Roderick who, as Head of School from 1951 to 1978, initiated programs of engagement with industry to build and to augment the teaching and research programs of the School through the Graduates Association and the Civil Engineering Foundation.
