The Sydney Quality of Life Office, University of Sydney, is hosting the 2020 Conference on Measuring Patient-Reported Outcomes (PROs) in Research and Clinical Practice, including ISOQOL’s Introduction to PROs course.

Date: 22-24 July 2020
Location: Abercrombie Business School, University of Sydney, Sydney NSW, Australia

Patient-reported outcomes (PROs) are important endpoints in clinical trials and have been used in clinical research for decades to ensure the patient voice is considered. More recently, PROs are being used in routine clinical practice to improve communication between healthcare providers and patients and to inform decision-making. Australia now recognises the assessment of PROs in clinical practice as an important area and multiple programs are underway nationally that are rolling out routine collection of PROs in oncology clinical settings.

Australasian countries are geographically removed from the USA and Europe, where most of the International Society of Quality of Life Research (ISOQOL) annual conferences are held, limiting opportunities for QOL/PRO researchers from this region to attend the annual conference. Bringing researchers together across this region will facilitate networking, provide opportunities for collaboration and knowledge dissemination, and facilitate multi-disciplinary, cross-state research underpinned by rigorous PRO science and methodology. As such, this conference will bring together and support local-based ANZ PRO researchers and clinicians to:

1. Share research findings and methodological developments related to the use of PROs in clinical practice and research;
2. Provide an opportunity for networking;
3. Promote high quality research in the science of PRO measurement; and
4. Raise awareness of PRO-related activities across ANZ.
